

Models: MC10, MC12, MC15

Tiller head and controls

The tiller head is designed for operator comfort and features an ergonomic shaped handle with angled grips and integral hand guard. A large dimensioned, low effort, butterfly button controls direction of travel and speed as well as the electromagnetic brake, all are accessible without having to remove the hand from the handle. Lift and lowering, tilt and side shift buttons located on the tiller head can be readily accessed for left or right hand use. The travel direction inverter button is designed for maximum angle of contact with the operator's body. When activated, the direction of travel is automatically reversed and the truck comes to a stop. The horn is located on top of the tiller head and is actuated by thumb or fore finger. The creep speed control allows the truck to be operated with the tiller arm in the vertical position at reduced speed for manoeuvring in tight confines. The tiller arm is spring assisted and returns automatically to the vertical position when released and can be rotated for ride driving (optional).

Instrumentation

The pallet truck's dash board features a multi-function indicator displaying information on the status of the truck and alarm conditions should they occur. Operational information includes that provided by the battery discharge indicator and odometer. The red mushroom shaped button can be activated to stop the truck immediately in case of an emergency.

Operator platform (optional use)

The large operator platform allows the operator to determine the most comfortable driving position during long travel distances, providing the operator with maximum comfort. The cushioned platform incorporates an operator presence switch (or "man on board" sensor), preventing the truck from operating without a driver present. The dash board has compartments for stationery and other small items with an optional A4 document holder.

Servo power steering

The servo power steering system reduces steering effort, making the truck easy and light to steer in all working situations. The steering reacts immediately to ensure maximum performance.

Chassis and forks

The steel welded chassis is surface treated and painted with two-component epoxy paint. The three chassis lengths available and the 939mm maximum width of the truck make it ideal for handling loads in tight spaces for example inside containers or in stocking corridors.

The FEM 2A forks are manufactured from forged steel.

Masts

A range of masts is available to match all operating needs. The none dampening masts are available in two stage LFL and three stage FFL configuration as standard.

Battery

A range of power options is available through a choice of vertically extracted batteries:-

24V - 300 Ah

24V - 400 Ah

Wheels

All wheels are manufactured from Vulkollan.

Load wheels are fitted in manner to avoid any impact with load unit.

Electric motors

The 4kW AC motor provides instant response to forward and reverse traction inputs, providing considerable torque. The maintenance free motor (inspection intervals required every 1,000 operating hours) provides low cost long operational life. The 3 kW DC lift motor provides power to match the truck's operational requirements.

Traction – steering unit

The cast-iron gear train has helical gears immersed in an oil bath. The motor is mounted vertically for efficient ventilation and to eliminate flexing

stresses to the power cables to ensure maximum uptime. The steering is actuated by gear-gear, a maintenance and regulation-free system.

Hydraulic unit

The silent, powerful hydraulic pump, activated by the electric motor, is of double gear type. The transparent tank makes the checking of the hydraulic oil level easy. All hydraulics functions are actuated by solenoid valves activated directly by the tiller push buttons. Lift and lowering are by proportional control.

Electronic controls

The Combi MOSFET controller manages both the AC traction engine and the DC lift motor eliminating the need for contactors. High energy efficiency and motor performance increases shift operation time and reduces battery charging. The combined characteristics of the traction motor and the operator control panel enhance the efficiency of the release and inversion braking, without reduction of autonomy. This leaves the electromagnetic brake for parking and emergencies. Electronic performance parameters are easily customised by a service technician. The truck performance output can easily be matched to ensure the maximum application requirements.

Options

Options available include:-

- Selection of drive wheels
- Selection of fork lengths
- Key Pad
- A4 document holder
- Cold store - 30°C
- Load backrest
- Mast selection
- Forks tilt
- Side shift

Truck shown with optional equipment

Pedestrian Counterbalanced Tiller Arm Stacker Truck

1,000kg 1,200kg and 1,500kg

- Servo power steering
- Dual-Combi MOSFET
- Yale AC Technology
- AC drive motor
- 24V/300 - 400 Ah battery
- Rider or pedestrian operation

Truck Dimensions

*with load backrest = + 461mm.

Tiller Head

- 1 Forks lift-lowering (proportional buttons)
- 2 Side shift buttons
- 3 Travel direction inverter button
- 4 Butterfly direction and speed control buttons
- 5 Horn
- 6 Creep speed
- 7 Tilt buttons
